MILESTONE CHRONICLES

🔥 Nano Contracts Audit

Big news, Hathorians! The security audit for Nano Contracts is officially complete, marking a significant milestone on the road to the mainnet. Conducted by Halborn, one of the most trusted names in blockchain security, the audit covered everything from core systems to performance and stability. With their stamp of approval, we're one step closer to bringing Nano Contracts live.

💎 KuCoin Gemslots, in celebration of the Halborn audit

To kick off the Nano Contracts audit with Halborn, a key step toward the mainnet launch, we joined forces with KuCoin for a special GemSlot Campaign, putting 700,000 HTR in prizes on the line.

Community members completed simple tasks and claimed their share of the rewards. It was a celebration of progress, security, and growth for the **Hathor ecosystem**.

🟩 BitcoinOS and Charms

Hathor is partnering with BitcoinOS and Charms to bring native Bitcoin liquidity and cross-chain token movement to our ecosystem. xBTC is coming to Hathor, and our tokens will soon tap into Bitcoin-native DeFi tools. Both networks share a scalable, UTXO-based vision, and we're just getting started.

Alongside the tech integration, we've also run cross-community activities focused on community growth, bringing together members from both ecosystems. Stay tuned as we roll out content, updates, and deeper integration in 2025!

🚀 Hathor Network Ranks Among Top Projects

Hathor Network has been recognized among the top projects by development activity growth, posting an impressive +355%.

This reflects the hard work of our team and contributors as we continue to ship, refine, and expand the ecosystem. From protocol upgrades to developer tools, the momentum is real. We're just getting started!

📺 Tech Talk with Marcelo: Approaching the finish line

In the latest session, Marcelo shared big updates on Nano Contracts. Nanos are almost here, set to launch, with the Halborn audit complete and activation already on testnet. Built on a Python VM, they feature anti-MEV protection and native RNG, enabling new use cases without oracles. Designed to be more secure and versatile than other smart contract platforms, Nanos mitigates common attack vectors by design. The wait is nearly over.

✅ Ecosystem Update: Builders in Action

Our grant recipients are turning vision into reality, delivering tangible progress across the board.

● **Khensu** is getting closer each day to enabling efficient and fair token creation.

● **Dozer** has been busy, over 3,000 lines of fresh code written in just the past few weeks. No forks, no shortcuts. Just ground-up engineering to power a next-gen DEX with MEV protection, built for performance and security.

● **THOTH.ID** is moving forward with its public roadmap, offering a clear view of what's next, from domain management to advanced NFT tooling.

The message is clear: the ecosystem isn't waiting for what's next — it's building it right now.

ON THE HORIZON

🧩 MetaMask UI Finalized

Web Wallet Coming Soon

The Hathor MetaMask Snap interface is now complete and is currently under review by external auditors. These screens are crafted to ensure a smooth and intuitive experience when connecting to the network.

At the same time, we've been previewing a brand-new web wallet designed specifically for the Snap integration. We're now ready to confirm that the initial release will support basic HTR send/receive functions, setting the stage for future enhancements and expanded capabilities.

🦊 Uniswap Listing

Opening the Door

Wrapped HTR is set to make its way to Uniswap. With Nano Contracts launching, a Uniswap listing moves to the top of the agenda — driving liquidity, increasing visibility, and unlocking broader DeFi opportunities. This isn't just another listing — it's a pivotal step in Hathor's EVM journey.

Stay engaged, keep building, and see you on-chain!
